                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a method for modulating the amount or method involves introducing into the animal an osteopontin in an animal. The method involves introducing into the animal an osteopontin or thrombospondin 2 antagonist. Using the methods of the invention the amount or biological activity of thrombospondin 2 or osteopontin protein may be modulated. The method of the invention is useful for modulating the amount or biological activity of thrombospondin 2 or osteopontin protein an animal which exhibits a wound response or a foreign body response, where the method can be used to improves the wound response or reduces the foreign body response. The method is useful for modulating a wound response or for reducing a foreign body response in an animal and is also useful for improving the wound response in an animal and is also abrasion or burn. The present sequence represents the human coln, and the thrombospondin 2 protein used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         109 GAGCATCCTGCACTGCAGGCCGGGTCTCTCGCTCCAGCAGCCTGCGCCTTTCTGACTC 168

The method involves assessing the level of thrombospondin (TSP) protein and/or gene expression in a biological sample. The invention also provides a method useful for assessing the efficacy of a compound or anticosqulant therapy for inhibiting CVD in a patient. CVD include atherosclerosis, coronary artery disease, myocardial infarction (MI), stroke, peripheral vascular disease, congestive heart failure, venous thromboembolism and pulmonary embolism. The invention is also used in gene therapy. The present sequence is human TSP-2 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            æ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Diagnosing and monitoring a cardiovascular disease in a patient, by assessing the level of thrombospondin protein and/or gene expression in biological sample.

The invention relates to an isolated polynucleotide (I) comprising: (a) any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b) complements of (a); (c) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under moderately stringent conditions; (e) sequences having at least 75% or 90% identity to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596-ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer in a patient and compositions comprising polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells expressing the polypeptide are useful in treating pancreatic cancer and stimulating an immune response. The polynucleotides can be used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   14-JAN-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABV94768
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABV94768

```
This invention describes a novel method for identifying a subject as a candidate for a particular course of therapy to treat a vascular disease or disorder. The method comprises determining the identity of the nucleotide present at specific positions, or their complements, and identifying the subject as a candidate for a particular clinical course of therapy based on the identity of the nucleotide present in that specific position. The method can be used for identifying a subject who is a candidate for further disgnostic evaluation of a vascular disease or disorder and selecting a clinical course of therapy. The products of the invention have cardiant, antiarteriosclerotic and cerebroprotective convention have cardiant, antiarteriosclerotic and cerebroprotective activity and can be used for gene therapy. The methods disclosed are convinty and can be used for gene therapy. The methods disclosed are convently disease, myocardial infarction, ischaemia, etroke, peripheral vascular diseases, venous thromboembolism and pulmonary embolism. The DNA sequences are useful as fingerprint for detecting different individuals within the same species applicable in forensic studies and paternity cesting. This sequence encodes the human THBS2 gene represented in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GGTCCGGAACACTGAAACCAGTCATCACCATCTTTTTGGCAAACCAGGAGCTCAGCTG 228

The invention relates to a method for determining the identity of one or more allelic variants of a polymorphic region of a thrombospondin 2 (THBS2), angiotensin converting enzyme (ACB)-1 and/or beta-fibrinogen (FGB) genes in a nucleic acid obtained from a subject. The method involves contacting the nucleic acid obtained from a subject. The method primer. The method is useful for diagnosing or aiding in the diagnosis ovascular disease or disorder in a subject e.g. myocardial infarction, coronary artery disease, atheroselevois is ischaemia, stroke, peripheral vascular disease, venous thromboembolism and pulmonary embolism. The present sequence is human THBS2 reference DNA
                                                                                                                                                                                                                                                                                  Identifying polymorphisms in thrombospondin 2, angiotensin converting enzyme and/or beta-fibrinogen genes in nucleic acid sample of subject, contacting the nucleic acid with a complementary probe or primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GAGCATCCTGCACTGCAGGCCGGTCTCTCGCTCCAGCAGAGCCTGCGCCTTTCTGACTC

Human, thrombospondin 2, THBS2; ss; gene; single nucleotide polymorphism; SNP; antiarteriosclerotic; cardiant; vasotropic; cerebroprotective; cardiavascular-Gen; Thrombolytic; gene therapy; atherosclerosis; coronary heart disease; myocardial infarction; stroke; peripheral vascular diseases; venous thromboembolism; pulmonary embolism; chromosome 6q27.

Homo sapiens

The invention relates to predicting the likelihood of a vascular disease, comprising obtaining a nucleic acid sample from the individual, and determining the genotype of the individual at nuclectide position 3949 of the thrombospondin-2 (THBS2) gene, where an individual who is homozygous for the variant allele has a decreased likelihood of a vascular disease of as compared with an individual who is heterozygous for the creference allele. Also included are diagnosing or aiding in the diagnosis of a vascular disease in an individual (comprising obtaining a nucleic at nuclectide position 3949 of the thrombospondin-2 gene, where the cat managed from the individual, and determining the nucleic presence of a T at nuclectide 3949 is indicative of an increased of a vascular disease in the individual, as compared with an individual having of at position 3949, a nucleic acid molecule comprising all or a portion of a sequence appearing as ADD31094 (where the nucleic acid molecule is at least 10 nucleotides in length and where the nucleic acid molecule is at least 10 nucleotides in length and where the nucleic acid molecule is at least 10 nucleotides in length and methods are useful nucleic acid molecule cited above. The composition and methods are useful and an allele-specific oligonocleotide that hybridiess to the nucleic acid molecule cited above. The composition and methods are useful cresponse of vascular diseases (e.g. atherosclerosis, coronary heart response of vascular diseases (e.g. atherosclerosis, coronary heart cresponse of vascular diseases (e.g. atherosclerosis, coronary heart cresponse in developing new treatments for vascular disease and in developing cell culture-based and animal models for research and cell culture-based and animal models for research and cell culture-based and animal models for the disease. The pene cbn in the construction is the cDNA encoding thrombospondin 2. Predicting the likelihood of a vascular disease (e.g. stroke) in an individual comprises obtaining a nucleic acid sample from the individual and detecting a single nucleotide polymorphisms in the thrombospondin-2 nucleotide polymorphism" "Single nucleotide polymorphism" 97.9%; Score 5576.6; DB 9; Length 5784; 99.4%; Pred.                                                                                                                                                                                                                                                                                       5739
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method of determining whether a patient will respond to treatment with a farnesyl transferase inhibitor (FTI), by analyzing the expression of gene that is differentially modulated in the presence of an FTI. The method is useful for determining whether a patient will respond to treatment with a FTI such as (B) 6-[amino(4-chlorophenyl) (1-methyl-1H-imidazol-5-yl)methyl]-4-(3-chlorophenyl) in methyl-2-(IH)quinolinone, monitoring the therapy of a patient, treating a patient with leukemia with FTI if the analysis indicates that the patient will respond. This sequence corresponds to a gene whose expression may be modulated in the presence of FTI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Determining whether a patient will respond to treatment with a farnesyl transferase inhibitor, by analyzing the expression of gene that is differentially modulated in the presence of the inhibitor.

(GEHO) GEN HOSPITAL CORP Detmar M, Streit M;

WPI; 2000-656131/63. P-PSDB; AAB19677.

Treating a disorder characterized by unwanted cell proliferation e.g. precancerous, cancerous or neoplastic cells or presence of tumor preferably of skin or prostate, comprises increasing thrombospondin-2 activity.

Disclosure, Fig 1A-B; 73pp; English.

The present sequence is that of cDNA encoding human thrombospondin-2 (TSP -2, see AAB1967). The CDNA was obtained from placenta cDNA by PCR amplification. The invention is based on the discovery that coverspression of TSP-2 decreases tumor size in vivo, and features methods for modulating unwanted angiogenesis and tumour growth. Treatment of unwanted cell proliferation or angiogenesis involves increasing TSP-2 ctivity. This can be achieved e.g. by administering an agent which increases TSP-2 activity, especially a TSP-2 polypeptide, a TSP-2 derived polypeptide or retro-inverso peptide, a mucleic acid encoding TSP-2, an agonist of TSP-2 or by increasing endogenous TSP-2 activity by increasing the level of gene expression, increasing the stability of TSP-2 ratability of the TSP-2 protein. The methods are used to treat a disorder characterised by pre-cancerous, cancerous or neoplastic cells, or the presence of a tumour, or a disorder that affects epithelial tissues resulting in unwanted skin cell proliferation. Such disorders include malignant melanoma, prostate cancer, squamous cell carcinoma, aged skin, rosecea dermatosis, psoriasis, and skin damage caused by photoradiation is useful for dagnosing a subject at risk of unwanted cell proliferation or a uniquenessis. Methods are also provided of identifying compounds that TSP-2 activity

Treating a subject having a disorder of unwanted cell proliferation or unwanted skin condition, e.g. squamous cell cancer, prostate cancer or psoriasis, comprises increasing or modulating thrombospondin-2 activity in the subject.

Disclosure, Fig 1; 85pp; English.

The invention relates to treating a subject having a disorder of unwanted cell proliferation or unwanted skin condition which comprises increasing, or modulating thrombospondin-2 (TSP-2) activity in the subject. The methods, TSP-2 protein and TSP-2 nucleic acid are useful for treating a subject with a disorder of unwanted cell proliferation or unwanted skin condition (e.g. squamous cell carcinoma of the skin, malignant melanoma, prostate cancer, breast cancer, Karposi's sarcoma, papilloma formation, prostate cancer), bowel cancer, Karposi's sarcoma, papilloma formation, posilasis, rosacea dermatosis, aged skin, abnormal hair growth, or skin damage caused by photoradiation e.g. UV radiation). The methods are also useful for evaluating if a subject is at risk for unwanted proliferation. The disorder can also be an unwanted anglogenesis (e.g. diabetic retinopathy, post-coronary angioplasty restenosis), or inflammatory disorder associated with anglogenesis (e.g. rheumatoid arthritis or multiple sclerosis). The present sequence represents cDNA concing human thrombospondin-2

4277 human colon cancer-associated polypeptides, diagnosing and/or treating colorectal cancers.

Claim 1; Page 3236-3237; 9803pp; English

Nucleic acids encoding useful for preventing,

cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens may be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and vaccine production. N and P may be used in the prevention, diagnosis and vaccine production. N and P may be used in the prevention, diagnosis cample, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to produce the colon cancer-associated Ps. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. In and P carcinomas and cancers. AAH37196 to AAH37204 and AAB37789 represent sequences used in the exemplification of the present invention. N.B. Bages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027
